

The founders of Isomorphic Software are committed to keeping a complete, up-to-date version of SmartClient available under an LGPL license.

We continue to invest heavily in building new features, skins, tutorials, and tools for SmartClient LGPL.

We think it's normal and expected that some people receive great benefit from LGPL software and do not pay. The spirit of open source, in a nutshell, is that releasing free software creates so much wealth that the portion that flows back to you is more than enough.

Sincerely,

Charles Kendrick
